

Typical Produce Across the Season

Primrose Valley Farm CSA
growing for a better world

Content of weekly deliveries naturally varies in the course of the growing season. Early in the season, produce emphasizes leafy greens, root vegetables and other items not requiring warm soil and an extended growing period. Delivery boxes grow in variety and abundance as the warm summer months come to pass.

Later deliveries bring to our tables long day-to-harvest crops that emphasize both time of year and celebration of the autumn harvest. The following are examples of the type of crop that typify early, mid and late season deliveries.

These are typical of vegetables and herbs that are harvested and delivered at their respective times within the growing season. We meticulously plan the timing of our seed orders, growing, harvest and delivery schedules to produce this wide variety. However, since the times of our biblical ancestors, agriculture remains subject to the uncertainties of weather and other natural influences. We take these influences into account but recognize that they do exist.

Early Season

- Cabbage
- Escarole
- Basil
- Beans
- Lettuce Heads
- Onions
- Sugar Snap Peas
- Radish
- Salad Mix
- Scallion
- Spinach
- Turnips

Mid Season
